

Katedra Archeologii Barbaricum i Prowincji Rzymskich ma przyjemność zaprosić na wykład

Prof. dr. hab. Michaela Meyera
(Freie Universität Berlin, Institut für Prähistorische Archäologie)

pod tytułem

Archaeological investigation of the Germanic-Roman battlefield of Harzhorn, Lower Saxony

Wykład odbędzie się **10 października 2024 roku** o godzinie **15.00** w budynku Wydziału Archeologii UW,
ul. Krakowskie Przedmieście 26/28 w Warszawie, **sala 210**.

Battle at the Harzhorn: Iron tips of Roman catapult projectiles (Braunschweigisches Landesmuseum, CC BY 3.0 DE)

Abstrakt

In 2008 an ancient battlefield between a Roman army and German groups was discovered in a forest near Northeim, Lower Saxony. From then onwards the battle was investigated by a team of archaeologists, geographers and historians. It is part of a revenge campaign of the emperor Maximinus Thrax that took place in 235 AD. In the lecture the results of the research will be presented, including a model of the activities that took place within a couple of hours and that can be reconstructed by analyzing the finds and their distribution.

O Autorze

Professor at Freie Universität since 2008; previously research associate at Humboldt-Universität (1994-2005), head of department at the Brandenburg State Office for the Preservation of Historical Monuments (2005-2007) and research associate at the Institute for Hessian Regional Studies (1990-1994). Habilitation in 2005 on the Mardorf settlement excavation and the cultural conditions in the German Central Uplands in the centuries around the birth of Christ; doctorate in 1990 on the multi-periodic site of Pevestorf (ball-amphora culture, Aunjetitz culture, younger bronze age) in the Hannoversche Wendland. Large excavation projects: Mardorf (Hessen) Glienicke (Jastorf settlement with iron smelting, Brandenburg), Leimbach (Przeworsk settlement, Thuringia), Ivancea (settlement of the Poieniști-Lucașeauca culture, late Iron Age, Republic of Moldova).
